
Implementing Esri's Campus Basemap template

The Campus Basemap template is an ArcGIS map document that is used to create high-resolution maps for university, business, or government complexes. It provides reference information that orients users and supports daily decision-making for desktop, mobile and web applications.

The template is organized around scales defined in the Google/Microsoft Maps tiling scheme for ArcGIS Server large scales (from~1:9K to ~1:140) and allows users to overlay interior spaces and building assets.
